## Company

Not one of us can afford to take our clean air, fresh water and lush, dense forests for granted.

## Our Process

Maybe it seems odd that a mill working company would be so outspoken in favor of forestry conservation. But to us it just makes good sense. Can you imagine a painter who didn't care if all the colors slowly drained from the world, or a musician who stood by as every sound went silent?

## Case Studies

At MCM, we take our responsibility to sustainable forestry and green building very seriously. We are proud to be fully certified by the Forest Stewardship Council (FSC) and are committed to maintaining our high Leadership in Energy and Environmental Design (LEED) Green Building Rating.

## Portfolio

Apart from the stringent criteria needed to achieve and maintain these designations, MCM believes that environmentally friendly policies make good sense. We use only formaldehyde free core materials, we control emissions at our central processing plant and we work to lead by example, demonstrating to the woodworking industry at large that sustainability is the only viable choice for our industry and society.

## Company

Quality. Unsurpassed.

That's a bold statement but one we can back up. At MCM, an architectural millwork firm, quality begins at our state-of-the-art 90,000 square foot manufacturing facility in Central Canada. It continues with our team of skilled cabinetmakers, finishers and craftspeople. They are the best in the industry, having worked on some of the world's most prestigious architectural projects.

## Our Process

Our experienced estimators and project managers have the knowledge and expertise to take a project from initial budgeting through final completion, allowing us to maintain not only the high quality we're known for, but also overall project cost efficiency.

## Case Studies

In the end, true quality can only be judged from lasting results, timeless reflections of superior craftsmanship and an unmatched commitment to excellence.

**Company**

**Estimating**

From the moment your drawings come into our shop, we set to work making your ideas into workable reality. By applying principles of value engineering, we're able to save production costs through insights gained on numerous successful jobs. Throughout the process, our fundamental goal is on ensuring fidelity to your vision, guaranteeing an end solution that matches your wildest expectations and stays on budget.

**Our Process**

Mid Canada Millwork's highly skilled team of estimators specialize in many types of projects, including hospitals, labs, hotels, casinos, courthouses, embassies and office buildings. Our estimators have wide-ranging backgrounds and specialties and many of them are homegrown, having come from within our production facility. This means they have an excellent understanding of how the products for your project need to be built.

**Case Studies**

Additionally, MCM maintains a computerized database of historical costs for our projects, ensuring that MCM will provide consistent pricing and accurate quotes that you can be fully confident of. **PLEASE SELECT TO CONTINUE**

**Company**

***Budget Pricing***

Mid Canada Millwork will provide budget pricing throughout the pre-construction phase. This will help the General Contractor to fully understand the major cost impacts immediately, and to help control the budget costs.

**Our Process**

***Value Engineering***

A significant benefit to our estimating services is the component of value engineering. MCM's experienced staff will analyze the overall project plan and provide insightful ideas for innovative cost saving methods that work to maintain project integrity. Here are just a few of the criteria examined by MCM specialists in the value engineering process:

1. Are there alternative materials available that will allow for material and/or labor savings?
2. Are there alternative manufacturing techniques that will allow for material and/or labor savings?
3. Is there the possibility of streamlining the design to allow for a simplified manufacturing process without altering the finished appearance of the product?
4. Are there items that can be incorporated into the overall Scope of Work in order to reduce site labor?

**Case Studies**

***Change Orders***

Mid Canada Millwork provides costing for change orders in a very timely fashion to help the customer realize the cost impact of the changes as quickly as possible.
